ASEM SEMICONDUCTOR TALENT INTELLIGENCE

Dashboard-first decision review

This local dashboard lets you inspect candidate-to-track fit, run the live Z.AI-backed decision path when credentials are configured, and use a clearly labeled degraded demo path for UI validation when they are not.

RUNTIME	PRIMARY MODEL PATH	DEMO FALLBACK
ok / local	Z.AI GLM	Labeled non-judge-path

OVERALL SCORE	CONFIDENCE	PROVIDER
0.76	0.78	demo-heuristic

MISSING INPUTS
0

DECISION INPUT

Candidate and training track payload

Edit the synthetic fixture, then run either the live Z.AI route or the local demo route.

Demo result loaded

```
      "validation engineer trainee",
      "robotics trainee"
    ],
    "minimum_coding_score": 60,
    "minimum_math_score": 60,
    "employer_demand_signal": 0.82,
    "wage_growth_signal": 0.73
  }
}
```

Run live Z.AI decision Run local demo Reset sample

The local demo path is intentionally degraded and clearly labeled. It is suitable for dashboard and schema validation only, not for judge-path reasoning.

DECISION OUTPUT

Recommendation and evidence

The dashboard surfaces score breakdown, factors, gaps, pathway steps, and the raw response contract.

Recommendation

```
Advance the candidate into Chip Validation and Robotics Basics.

The deterministic baseline indicates that this candidate is already close to
track readiness and can move into the target pathway with focused
reinforcement on remaining gaps.
```

Top factors

1. accessibility to the training location
2. completion likelihood based on prior signals
3. employer demand alignment

Pathway steps

1. Close the skill gap in python_basics through a targeted module or project.

Raw response

```
{
  "candidate_id": "cand_0001",

OFFICIAL DATA SLICES

Market signals

These panels consume the new API routes so you do not need to open raw JSON endpoints manually.

Refresh market panels

GIS ACCESSIBILITY

Top semiconductor hotspots

Candidate-to-hotspot access is ranked from the current payload.

1. IC Park 2 and ASEM (Selangor) score 1, 4.7 km
2. Johor Advanced Electronics Corridor (Johor) score 0.4, 277.6 km
3. Kulim Hi-Tech Manufacturing Corridor (Kedah) score 0.4, 298.8 km

Manufacturing wage slice

Market panels loaded

```
Selangor median manufacturing
wage: MYR 4,200
Date: 2025-Q4
Source: OpenDOSM formal wages
fixture slice
```

Employer demand snapshot

```
1 employer-demand rows loaded
for Chip Validation and Robotics
Basics.
Top role: Validation Engineer
Trainee at ASEM Validation
Partners
Salary band: MYR 5,000 to 6,500
Demand score: 0.9
```

OJT MATCHING

Best-fit roles

The matcher ranks employer roles by fit, access, demand, and salary band quality.

1. Validation Engineer Trainee at ASEM Validation Partners score 0.8, MYR 5,000 to 6,500

ECONOMIC MOBILITY

Wage pathway estimate

The top OJT role is used to generate a directional wage-mobility estimate.

```
Validation Engineer Trainee
Current estimated wage: MYR 4,200
Target estimated wage: MYR 5,750
Estimated uplift: MYR 1,550 (36.9%)
Evidence strength: medium
Current wage is estimated from a
manufacturing proxy unless a direct
wage is supplied.
```
